Blood vessels are divided into two broad categories: macrovasculature and microvasculature. The macrovasculature is composed of those blood vessels that can be seen with the naked eye.

### **Histology - Yale University**

Blood is the “river of life” that surges within us. It transports everything that must be carried from one place to another within the body- nutrients, wastes (headed for elimination from the body) and body heat through blood vessels. Long before modern medicine, blood was viewed as magical, because when it drained from the body, life departed as well.
