Energy moves through the food chain from life form to life form. The first step is always photosynthesis in which the sun's radiant energy, that pours onto the earth everyday, is turned into carbohydrate molecules. These carbohydrates are used by all living things as fuel for energy, and as building blocks to build more pieces of themselves.

A flashlight (more often called a torch outside North America) is a portable hand-held electric light. The source of the light is usually an incandescent light bulb (lamp) or light-emitting diode (LED). A typical flashlight consists of the light source mounted in a reflector, a transparent cover (sometimes combined with a lens) to protect the light source and reflector, a battery, and a switch.
