The oscillations that produce the propagation of a wave are frequently simple harmonic. For mechanical waves, energy is transferred by the transmission of energy from one adjacent simple harmonic oscillator to the next. For electromagnetic waves, the oscillations of the fields are approximately simple harmonic.

When most people think of waves, they think of water waves. But light and sound also travel as waves. A light wave, like a water wave, is an example of a transverse wave, which causes a disturbance in a medium perpendicular to the direction of the advancing wave. In the diagram below, you can also see how transverse waves form crests and troughs.
