Macadam is a type of road construction, pioneered by Scottish engineer John Loudon McAdam around 1820, in which single-sized crushed stone layers of small angular stones are placed in shallow lifts and compacted thoroughly. A binding layer of stone dust (crushed stone from the original material) may form; it may also, after rolling, be covered with a binder to keep dust and stones together.

These requirements continue to increase as technology advances. In some instances, it is becoming difficult for corporations to meet these challenges, especially when timescales are so long, capital invested in research and development phases so great, and the tasks being attempted so complex that it is not known whether solutions can be found, that projects become extremely risky.
