The weight depends on the volume of water (in  $\text{m}^3$ ) and its density (in  $\text{kg}/\text{m}^3$ ). The density of water is about  $1,000 \text{ kg}/\text{m}^3$  - a litre weighs a kilogram. So, where  $g$  is the acceleration due to gravity - about  $9.8 \text{ m}/\text{sec}^2$ . (Kilograms are about mass, not force, so  $g$  has to be included to do the conversion.). The pressure depends on the length of vertical pipe. In fact, the length that matters is ...

An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...

In nuclear chemistry, nuclear fusion is a reaction in which two or more atomic nuclei are combined to form one or more different atomic nuclei and subatomic particles (neutrons or protons). The difference in mass between the reactants and products is manifested as either the release or absorption of energy. This difference in mass arises due to the difference in atomic "binding energy" between ...

His ship, an Alliance Naval Destroyer, was big too, but that was compared to planetary measurements, compared to a star system, to a galaxy, or to the universe, his ship, let alone he himself, was terribly insignificant, like an atom trying to make its mark upon a planet.
