The answer is simple: they're the pharmacy's to lose. There is no financial incentive for a provider to file a PA. Instead, they do so out of moral obligation to their patients (and because that's the way it's always been done, since providers are the only ones with access to the patient information needed to complete the PA).

The Monty Hall problem is a brain teaser, in the form of a probability puzzle, loosely based on the American television game show Let's Make a Deal and named after its original host, Monty Hall. The problem was originally posed (and solved) in a letter by Steve Selvin to the American Statistician in 1975 (Selvin 1975a), (Selvin 1975b). It became famous as a question from a reader's letter quoted ...

Why a Scientific Format? The scientific format may seem confusing for the beginning science writer due to its rigid structure which is so different from writing in the humanities. One reason for using this format is that it is a means of efficiently communicating scientific findings to the broad community of scientists in a uniform manner.

In Windows 10, by default, pressing CTRL+SHIFT (or for some ALT+SHIFT - thanks madmenyo ) will cycle through any keyboard layouts that you might have mapped and it's surprisingly easy to do this by mistake.. If you keep pressing CTRL+SHIFT (or whatever you might have changed it to) then soon you should get back to the correct setting. (alternatively reboot which is what I did first time ;-)

In the context of relational databases, a foreign key is a field (or collection of fields) in one table that uniquely identifies a row of another table or the same table. In simpler words, the foreign key is defined in a second table, but it refers to the primary key or a unique key in the first table. For example, a table called Employees has a primary key called `employee_id`.

### **Foreign key - Wikipedia**

Hi i have a question i know this was posted many times but i didn't find an answer to my problem. The problem is that i have a table and a column "id" i want it to be unique number just as normal. ...

### **postgresql duplicate key violates unique constraint ...**

The above solution may try all subsets of given set in worst case. Therefore time complexity of the above solution is exponential. The problem is in-fact NP-Complete (There is no known polynomial time solution for this problem).. We can solve the problem in Pseudo-polynomial time using Dynamic programming. We create a boolean 2D table `subset[][]` and fill it in bottom up manner.
