Figure 1. Small Intestine. The three regions of the small intestine are the duodenum, jejunum, and ileum. The jejunum is about 0.9 meters (3 feet) long (in life) and runs from the duodenum to the ileum. Jejunum means “empty” in Latin and supposedly was so named by the ancient Greeks who noticed it was always empty at death.

Evidence of common descent of living organisms has been discovered by scientists researching in a variety of disciplines over many decades, demonstrating that all life on Earth comes from a single ancestor. This forms an important part of the evidence on which evolutionary theory rests, demonstrates that evolution does occur, and illustrates the processes that created Earth's biodiversity.

Medicine is the science and practice of establishing the diagnosis, prognosis, treatment, and prevention of disease. Medicine encompasses a variety of health care practices evolved to maintain and restore health by the prevention and treatment of illness. Contemporary medicine applies biomedical sciences, biomedical research, genetics, and medical technology to diagnose, treat, and prevent ...

### **Medicine - Wikipedia**

A melanoma is a tumor produced by the malignant transformation of melanocytes. Melanocytes are derived from the neural crest; consequently, melanomas, although they usually occur on the skin (see the image below), can arise in other locations where neural crest cells migrate, such as the gastrointestinal tract and brain.

Kate is Jewish. It is incredibly important to her character and is one of the two major aspects that

make up who she is; the other, of course, being that she's a lesbian. That said, I am still in the process of converting and as such, I'm still studying and learning, so while I read daily, research and ask questions when I feel I need to, my knowledge is not nearly as extensive.
