Learning Objectives. Whereas anatomy is about structure, physiology is about function. Human physiology is the scientific study of the chemistry and physics of the structures of the body and the ways in which they work together to support the functions of life. Much of the study of physiology centers on the body's tendency toward homeostasis.

Like the rest of the body the heart needs blood to supply oxygen so that it can work. Without this it will start to die and when this is severe it is known as a myocardial infarction (heart attack). Thrombolysis is frequently used to treat MI and this works by breaking up the clot and restoring the blood flow.
