An Introduction To Numerical Solution

Radiative transfer is the physical phenomenon of energy transfer in the form of electromagnetic radiation. The propagation of radiation through a medium is affected by absorption, emission, and scattering processes. The equation of radiative transfer describes these interactions mathematically. Equations of radiative transfer have application in a wide variety of subjects including optics ...

The variance is a numerical measure of how the data values are dispersed around the mean. In particular, the sample variance is defined as: $s^2 = \frac{1}{n-1} \sum (x_i - \bar{x})^2$. Similarly, the population variance is defined in terms of the population mean μ and population size N : $\sigma^2 = \frac{1}{N} \sum (x_i - \mu)^2$. Problem. Find the variance of the eruption duration in the data set faithful.. Solution. We apply the var function to compute the variance of eruptions.

The n th percentile of an observation variable is the value that cuts off the first n percent of the data values when it is sorted in ascending order.. Problem. Find the 32nd, 57th and 98th percentiles of the eruption durations in the data set faithful.. Solution. We apply the quantile function to compute the percentiles of eruptions with the desired percentage ratios.
