Quick question (I hope). I have data from a self administered questionnaire that used a 7-point Likert scale. I have a few instances where respondents have scored midway between two points on a scale by circling two numbers, eg. 5 and 6.

### **How to Use the Likert Scale in Statistical Analysis ...**

Natural Language Processing, or NLP for short, is a field of study focused on the interactions between human language and computers.

### **Introduction to Natural Language Processing (NLP ...**

In this episode of This Is My Architecture, Juliano Vieira, Solutions Architect and Danilo Marques, Head of Analytics and Development at Diebold Nixdorf, explain how they designed a Lambda Architecture to process millions of transactions daily and to calculate a risk score in less than 1 second.

### **AWS | This Is My Architecture**

A Markov chain is a stochastic model describing a sequence of possible events in which the probability of each event depends only on the state attained in the previous event.. In probability theory and related fields, a Markov process, named after the Russian mathematician Andrey Markov, is a stochastic process that satisfies the Markov property (sometimes characterized as "memorylessness").

### **Markov chain - Wikipedia**

There are numerous ways to describe and present the variation that is inherent to most data sets. Range (defined as the largest value minus the smallest) is one common measure and has the advantage of being simple and intuitive. Range, however, can be misleading because of the presence of outliers, and it tends to be larger for larger sample sizes even without unusual data values.
