How to construct (draw) the incircle of a triangle with compass and straightedge or ruler. The three angle bisectors of any triangle always pass through its incenter. In this construction, we only use two, as this is sufficient to define the point where they intersect. We bisect the two angles and then draw a circle that just touches the triangles's sides.

### **How to construct (draw) the incircle of a triangle with ...**

This page has printable geometry PDFs on angle types. Most worksheets require students to identify or analyze acute, obtuse, and right angles.

### **Angle Types: Acute, Obtuse, Right - Worksheets**

This page shows how to construct a line parallel to a given line that passes through a given point with compass and straightedge or ruler. It is called the 'angle copy method' because it works by using the fact that a transverse line drawn across two parallel lines creates pairs of equal corresponding angles. It uses this in reverse - by creating two equal corresponding angles, it can create ...
