A CPU cache is a hardware cache used by the central processing unit (CPU) of a computer to reduce the average cost (time or energy) to access data from the main memory. A cache is a smaller, faster memory, closer to a processor core, which stores copies of the data from frequently used main memory locations. Most CPUs have different independent caches, including instruction and data caches ...

It's been 2 years since our last computation and it didn't look like anyone else was attempting to beat it. So we thought we'd see how much better we could do with improved software and two extra years of Moore's Law on computer hardware.. We didn't go for 20 trillion digits because of the massive space requirements.
