R f values are calculated by looking at the distance each component travels on the chromatography paper compared to the distance traveled by the solvent front. This ratio will be different for each component due to its unique chemical properties. When measuring the distance the component traveled, you should measure from the origin (where the middle of the spot originally was) and then to the ...

A one-step equation is as straightforward as it sounds. You will only need to perform one step in order to solve the equation. One goal in solving an equation is to have only variables on one side of the equal sign and numbers on the other side of the equal sign. The other goal is to have the number in front of the variable equal to one. The strategy for getting the variable by itself with a ...
