In computer science, counting sort is an algorithm for sorting a collection of objects according to keys that are small integers; that is, it is an integer sorting algorithm. It operates by counting the number of objects that have each distinct key value, and using arithmetic on those counts to determine the positions of each key value in the output sequence.

More types of antennas. The simplest radio antennas are just long straight rods. Many indoor TV antennas take the form of a dipole: a metal rod split into two pieces and folded horizontally so it looks a bit like a person standing straight up with their arms stretched out horizontally. More sophisticated outdoor TV antennas have a number of these dipoles arranged along a central supporting rod.

Marketing Perspective. Early marketing channel researchers such as Wroe Alderson and Louis P. Bucklin conceptualized the key factors for why and how channels are created and structured 29, 30, 31. From a supply chain standpoint, these researchers were on the right track in the areas of: 1) identifying who should be a member of the marketing channel, 2) describing the need for channel ...
