differences between plutonic and volcanic rocks are more complex and more revealing of the geological evolution of the earth. Thus, a representative plutonic rock would be granite, while representative in turn of volcanic rock would be basalt. Besides the difference between the large crystals of the former and the microscopic crystals of the latter, they contrast markedly in color.

As any farmer can tell, the natural patterns of climate have been altered. We know that warming—and cooling—has happened in the past, and long before humans were around. Many factors (called “climate drivers”) can influence Earth’s climate—such as changes in the sun’s intensity and volcanic eruptions, as well as heat-trapping gases in the atmosphere.
